What is Coronavirus?

A Kids Guide

Coronavirus is a flu-like virus. It is also called COVID-19.

Viruses can make people feel unwell.

Coronavirus will make you:

cough

have a sore throat

feel tired

have a fever (when your body gets very warm)

some people may find it hard to breathe, too.

If a person thinks they have Coronavirus, a doctor can do a test to check.

If they have Coronavirus or if someone they have been close to has it, then they must stay at home and not go anywhere until they are well.

Some people may even have to go to hospital,
to get better.

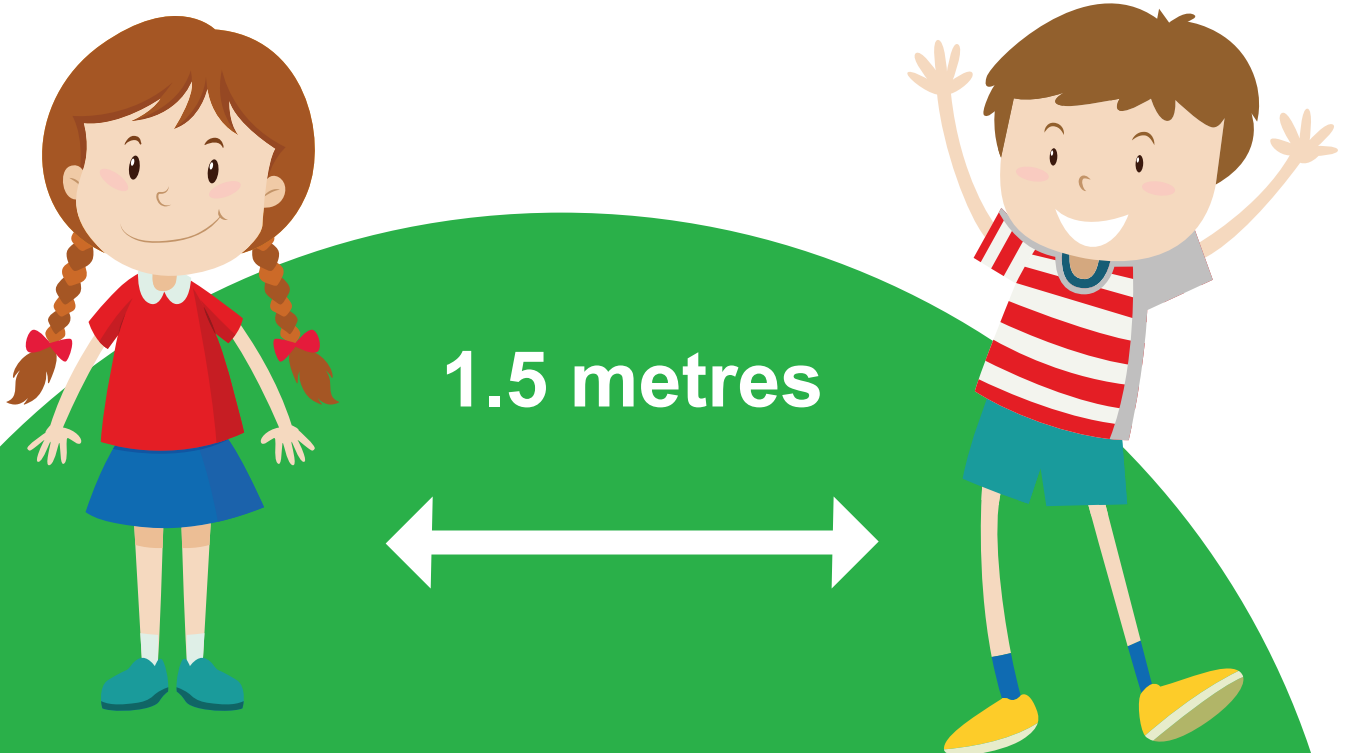

**There are some things you can do to stop
Coronavirus from spreading to yourself and others.**

You can:

stay at home

stand further away from people (1.5 metres apart)

You can:

wash your hands
often with soap
and water – sing
happy birthday
twice and this will
be long enough.

Cough and sneeze
into a tissue or your
elbow if you don't
have a tissue.

**Don't forget to
throw your tissue
in the bin and
wash your hands!**
